

Nature Nook

The Nature Nook is a special place for young children to enjoy hands-on, STEM-driven fun featuring “Book in the Nook” story time, meeting live animals, crafts, and lots of time for interactive, creative play. The Nature Nook is especially designed for children ages 1 through 7, and the space promotes interaction between children and their grownups, an important aspect of early childhood learning. Trained staff design and facilitate educational interactions to provide children with an opportunity to learn about the world around them.

Animal Care

All of our live animals are an integral part of the educational programming we offer. We use them both on and off-site, from camps to school tours to Scout badge programs. They not only make the programs more engaging, but they also help teach lessons that are difficult to grasp with just discussion, photos, and videos alone.

Science in Action Lab

The Science in Action Lab allows the Museum the flexibility to cover various science related topics such as paleontology, biology, chemistry, engineering, mathematics and technology. The Science in Action Lab is open during our busiest times of year: summer, weekends and during school breaks and special events.

Investigation Lab

Our newly created Investigation Lab is an interactive space where visitors and school groups engage in scientific exploration. This staffed area of the Museum immerses the public in activities designed to ignite curiosity about the natural world and science.
