Humans aren't the only creatures on the grounds of the Museum!
Our woods and meadows are recognized by the National Wildlife Federation as a Certified Wildlife Habitat.
**GRIZZLY BEAR (URSUS ARCTOS)**
Adult male grizzly bears can grow up to 2.4–3 meters (8–10 feet) tall, weigh close to 780 kilos (1,725 lbs.) and live 20–25 years. Native to western North America, they live in a variety of habitats and play an important role in their environment.

**IL PORCELLINO (THE WILD BOAR)**
The Museum’s fountain is a replica of a magnificent bronze by Pietro Tacca residing in the Straw Market in Florence, Italy. Legend says that good fortune will come to those who rub his nose.

**TRICERATOPS**
Triceratops was a plant-eating dinosaur living during the late Cretaceous period (65 million years ago). Its large body, unique frill and 3 horns make it one of the most recognizable dinosaurs. “Sara” is a kid at heart, measuring a mere 4.5 meters (15 feet) long and just over 1.5 meters (5 feet) high, much smaller than a full-grown triceratops measuring 8 meters (26 feet) in length and 3 meters (10 feet) tall.

**WHITE-TAILED DEER (ODOCOILEUS VIRGINIANUS)**
White-tailed deer are on average the smallest of the North American deer family. They are herbivores, feeding on grasses, twigs, leaves, and crops.

**GALÁPAGOS TORTOISE (CHELONODIS NIGRA)**
The giant tortoises of the Galápagos Islands are among the longest living vertebrates in the world, reaching an average age of 100. They are also the world’s largest tortoises, with some exceeding 1.5 meters (5 ft.) in length and reaching 250 kilos (550 lbs.)!

**DELAWARE ROCKS!**
Delaware Rocks features boulders, all from Delaware, within a garden of perennial groundcovers, grasses, ferns and bowers. Learn about the geology of Delaware through interpretive panels.

**BLACK BEAR (URSUS AMERICANUS)**
The American black bear is the smallest of the three bear species found in North America. Black bears have short, sharp claws that give them excellent tree-climbing abilities. They are omnivorous, eating plants, fruits, nuts, insects, small mammals, and carrion, as well as salmon in Northern regions.

**RED FOXES (VULPES VULPES)**
Artist Carrie Quade sculpted this playful family of red foxes in 2007. She named the mother Scarlett, and the father Red. The youngsters are Scratch, Sniff, Stalk, and Pounce.
